EDUCATION

Diploma in Information Technology– [L.J Polytechnic]
2023 - 2026

- Coursework includes Web Development, Database Management, and Object-Oriented Programming.
- Completed projects using HTML, CSS, JavaScript, and frameworks like React.js.
- Active member of the Coding Club and Hackathons participant.

PROJECTS

L.J Innovation village

TWINDER SPOT [IT Consulting] - Project Link

An IT consulting project designed to streamline freelance service management. The system supports three main user roles: **System User** (clients seeking services), **Freelancer** (service providers), and **Admin** (platform manager). The platform enables project posting, bidding, progress tracking, and administrative oversight.

TextUtils - Project Link

TextUtils is a simple web-based text analyzer that allows users to manipulate and analyze text easily. Users can perform actions like converting text to uppercase or lowercase, removing extra spaces, copying text, and checking text statistics such as word count and character count. It's built using **React.js** and provides a clean, user-friendly interface for efficient text processing.

Ongoing Project

CYBERVERSE [E-learning platform]

This project is an **E-learning platform** that enables instructors to create and sell courses, while students can browse, purchase, and learn through an interactive platform. The system supports three main user roles: **Admin**, **Instructor**, and **Student**, offering efficient course management, secure transactions, and seamless learning experiences.

SKILLS

- I have successfully completed a certification program from **C-DAC**, where I gained knowledge in **C-Programming**.
- I have successfully completed a certification course from **C-DAC** in **Python**, gaining hands-on experience in programming fundamentals, data structures, and real-world applications.
- And Basic **Course era Certificates**
